Technologies

- **C#** - Blazor, WCF, LINQ, WF, ASP.Net Core, .Net Core, EntityFramework
- **JavaScript** - Vue.js, jQuery, RxJS, DataTables.net
- **Java** - JDBC, JAX-RS, JPA(Hibernate)
- **RDBMS** - MS SQL, MYSQL
- **Azure** - Functions, Storage, VMs
- Powershell, Cmdlets, Providers
- Automation Design
- Maven
- JAMS Job Scheduler

Languages

- C#
- F#
- Java
- Haskell
- Powershell
- Javascript
- Shell Script
- Python
- T-SQL

Version Control

- GIT
- TFS

IDEs

- Visual Studio 2022
- Eclipse
- PyCharm
- VIM

Testing Frameworks

- XUnit
- JUnit
- TestNG
- QuickCheck

SDLC Tools

- Octopus Deploy
- Azure Devops

Summary

Experienced software engineer with expertise across diverse industries, including healthcare, e-commerce, and personnel management, spanning over several years. Demonstrated proficiency in developing scalable web applications using technologies such as Blazor, ASP.Net Core, .NET Core, and JavaScript frameworks. Skilled in building RESTful APIs, creating ETL processes with SSIS, and implementing CI/CD pipelines leveraging Octopus Deploy and Azure Pipelines to enhance development efficiency. Strong background in agile methodologies like Scrum for fostering effective team collaboration and delivering high-quality projects. Holds a Bachelor of Science in Computer Science from the University of Hartford, showcasing a solid foundation in computing principles. Seeking roles focused on innovative software architecture and application development to continue delivering impactful solutions in dynamic environments.

Education

2014 - 2018 — B.Sc. in Computer Science
University of Hartford

Work experience

June 2022 - October 2026 — Senior Software Engineer
AVI

- Developed and optimized Blazor Server/WebAssembly applications, employing event-driven and reactive design principles for enhanced performance.
- Designed and developed personnel management and time sheet tracking applications, significantly improving invoicing and billing efficiency.
- Created interactive reporting dashboards using Chart.js and RxJS, and migrated Tableau reports to proprietary web applications leveraging modern web technologies.
- Implemented RESTful APIs with .NET Core to support reporting and business intelligence applications.
- Built ETL processes utilizing SSIS to streamline data extraction, transformation, and loading workflows.
- Improved application reliability by incorporating end-to-end testing processes with Playwright, ensuring consistent functionality across deployments.

Sep 2020 - June 2022 — Systems Software Engineer
CortiCare

- Designed, developed, and launched a web-based remote EEG monitoring system utilizing ASP.Net Core for the backend and Blazor WebAssembly for the frontend.
- Migrated legacy JavaServer Faces (JSF) applications to modern C# ASP.Net Core architecture.
- Implemented and deployed CI/CD pipelines using Octopus Deploy to streamline software development workflows.
- Applied Scrum methodologies to improve team velocity and foster effective communication within cross-functional teams.
- Integrated third-party messaging service Qliq with the remote EEG monitoring system, enhancing automation capabilities and communication efficiency.
- Collaborated with product owners and stakeholders to translate business requirements into functional software solutions.

2019 - July 2020 — Software Engineer I
TicketNetwork

- Developed and maintained e-commerce API services for ticket sales transactions, ensuring seamless integration and optimal functionality.
- Created well-documented RESTful APIs using Swagger, enhancing usability and developer understanding.
- Designed and implemented ETL services tailored to specific business requirements, improving data processing efficiency.
- Contributed to agile processes through active participation in story grooming and sprint planning activities.
- Ensured timely delivery and quality of software components by managing their development, testing, and deployment lifecycle.
- Utilized Azure Pipelines within the SDLC to automate testing, deployment of services, and NuGet package distribution across environments.

2018 - 2019 — Associate Software Engineer
MVP Systems Software

- Enhanced and developed job scheduling software, contributing to improved functionality and performance.

- Collaborated with Product Support teams to identify, analyze, and diagnose application issues, ensuring prompt resolution and optimized user experience.
- Prepared detailed test reports summarizing results, conditions, and variances of software testing for comprehensive quality assurance.
- Conducted performance analysis of Windows Service applications, utilizing profiling tools such as DebugDiag and ProcMon for memory analysis and heap diagnostics.
- Designed and enhanced the PowerShell client for the JAMS batch processing application, streamlining automation efforts.
- Developed conversion tools to facilitate seamless migration from existing batch processing applications to JAMS, improving customer onboarding processes.
- Automated workflows using PowerShell and Azure technologies to reduce product release cycles and improve delivery timelines.
- Participated in daily SCRUM meetings to ensure alignment with Agile methodologies and project objectives.

2008 - 2013

Intelligence Analyst

U.S. Army

- Generated and performed quality control of intelligence reports that were used to make real time battlefield decisions by battle space commander.
- "Jo played a key role in this capture (High Value Individual HVI, Kandahar Taliban Senior Leadership) by providing the reporting that triggered the operation and ultimately provided fidelity required to capture the HVI" -CPT Hopper, Benjamin
- Mentored junior analysts in intelligence community policies, standard and procedures in preparation to deployment to Afghanistan."recognized by... EUCOM, CENTCOM and the State Department as being significant high value and essential" - SFC Bobe, Jose Luis
- Maintained analytical working aids.
